

Good-Badger

Gamifying the UN's Sustainable Development Goals

Developers:

Cedric Franz

Nicolaas Vercuiel

Donovan Risk

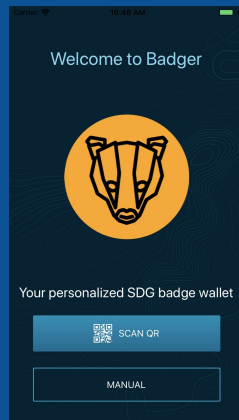

To gamify the SDG's, people need to be engage. We do this by allowing organisations to issue people with achievement badges as proof for their contribution to the SDGs.

- Good Badger is infrastructure
- Any institution can issue a NFT badge to a person for their contribution to the SDGs
- Each badge carries the date, achievement, issuer, receiver and the artwork
- The artwork is constructed by the issuer by fiddling bits and dynamically generated

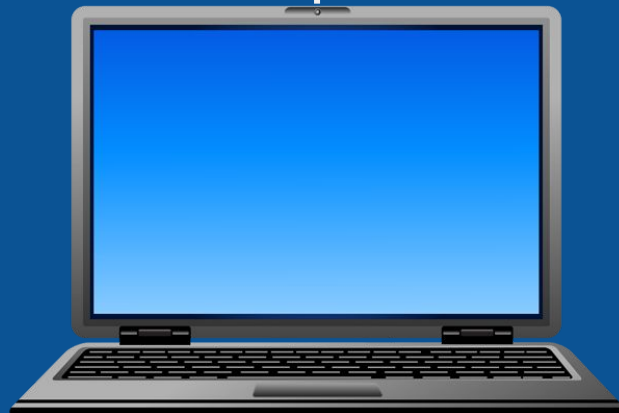

What we built!

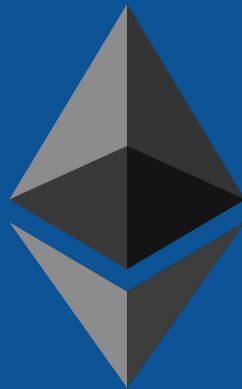

- An NFT ERC721 token to represent the badge
- A mobile app based wallet to hold the badges
- A web based issuing platform for organisations to issue tokens
- The artwork is constructed by the issuer by “fiddling bits” and it is then dynamically generated in the wallet
- A really slick user interface that makes it very easy to issue the tokens
- Contracts are deployed to Ropsten!
